SUMMARY

Fullstack Developer with a background in Sharia Economic Law and hands-on experience building and maintaining a production WhatsApp-based transaction automation system since 2024. Built CuanBot to automate digital-product sales by integrating third-party APIs, WhatsApp messaging, payment notification processing, inventory management, transaction tracking, and automated billing.

Strengthened fullstack development skills through intensive training in Golang, React.js, PostgreSQL, JavaScript, Tailwind CSS, Docker, and Linux. Experienced in translating real business requirements into functional software solutions and interested in contributing to reliable digital products, particularly within the financial technology and sharia ecosystem.

PROJECTS

EventHub - Event Management & Community Platform

May 2026 – Okt 2026

Tools - React, Vite, Tailwind CSS, Redux Toolkit, React Router, React Hook Form, Golang, Gin, PostgreSQL, JWT, Docker, Swagger/OpenAPI

- Developed a fullstack event management and community platform that allows users to discover, filter, save, and join events and communities, with guest access available for browsing before registration.
- Designed and implemented role-based access control for three user roles — Admin, Organizer, and Attendee — with different permissions and workflows for platform administration, event management, and event participation.
- Built RESTful APIs using Golang and Gin with PostgreSQL, covering authentication, user management, event management, booking, and administrative operations.
- Implemented JWT authentication with refresh tokens, password hashing, request validation, authentication and authorization middleware, and role-based access control to secure application workflows.
- Developed database relationships and transaction-based operations for event, user, booking, and community workflows, including database migrations, pagination, search, and filtering.
- Built responsive frontend interfaces using React, Tailwind CSS, Redux Toolkit, React Router, and React Hook Form, integrating frontend workflows with backend REST APIs.
- Implemented automated testing, including unit and integration tests, and documented APIs using Swagger/OpenAPI to support reliable development and API integration.
- Optimized frontend data fetching to reduce unnecessary backend requests by improving state management and request-handling workflows.
- Containerized the application using Docker and managed the development workflow with Git/GitHub.

Bootcamp project developed independently based on a standardized Figma design and functional requirements, with implementation logic and application architecture developed independently.

CuanBot - WhatsApp Digital Product Transaction Automation

Nov 2025

Tools : Node.js, Express.js, Baileys, SQLite, REST API, Pterodactyl

- Built and maintained a production WhatsApp-based transaction automation system for digital products, supporting approximately 15–30 transactions and Rp700K–Rp1M in daily sales.
- Automated the end-to-end transaction workflow for balance, data packages, PLN, and other digital products by integrating APIs from 3 active product providers with WhatsApp-based customer interactions.
- Replaced manual product availability checks, order processing, payment verification, and transaction

logging with automated workflows, reducing a typical manual transaction process from approximately 3–5 minutes to an automated flow.

- Implemented automated QRIS payment verification by processing payment notifications received through WhatsApp from BRI, enabling the system to confirm payments without manually checking the payment account.
- Developed operational features including real-time product availability, stock management, transaction history, balance management, Paylater tracking, automated billing, customer notifications, and configurable promotional poster generation.
- Deployed and maintained the application on a Linux-based Pterodactyl server with 2 GB RAM and 10 GB storage, including application logging and error monitoring for production operations.

EDUCATION

Koda Tech Academy - Bogor, Indonesia

May 2026 - Present

Fullstack Web Developer

- Intensive Fullstack Developer training focused on modern frontend and backend web development.
- Developed applications using React.js, Vite, Redux Toolkit, and Tailwind CSS.
- Developed backend services using Golang, Gin, and PostgreSQL.
- Practiced Docker, WSL, SSH, Linux, and basic application deployment workflows.

State Institute for Islamic Studies of Palopo

Bachelor of Sharia Economic Law

2017 -2021

SKILLS

Frontend Development – React.js, Next.js, Redux, React Query, Tailwind CSS, HTML5, CSS3, JavaScript (ES6+), Responsive Design, Vite

Backend Development – Golang, Gin, REST API, Clean Architecture, Middleware, JWT Auth, Database Integration

Database – PostgreSQL, Redis, GORM, SQL Optimization

DevOps & Deployment – Docker, Docker Compose, CI/CD (GitHub Actions, GitLab CI), Linux CLI,

Testing – Unit Testing (React Testing Library, Jest), Integration Testing (Postman, Go test),

API Design – RESTful API, gRPC, OpenAPI/Swagger Documentation

Version Control – Git, GitHub, GitLab, Git Flow

Project Management – Agile/Scrum, Jira, Trello, Notion, Technical Documentation

Cloud & Hosting – AWS (EC2, S3, RDS), Vercel, Railway, Firebase

Security & Best Practices – Input Validation, HTTPS, OAuth2, JWT, CORS
