ALMA'RUF HIDAYAT

Full Stack Developer

+6281973779380 | almarufhidayat99@gmail.com | Bogor, Indonesia
LinkedIn | Github | Portfolio

SUMMARY

Full Stack Developer (Golang, React.js, PostgreSQL) with a background in Sharia Economic Law and hands-on experience building and maintaining a production WhatsApp-based transaction automation system (CuanBot) that handles 15–30 transactions per day. Experienced in integrating third-party and payment APIs, building RESTful backends with clean architecture, and containerizing applications with Docker. Skilled at translating real business requirements into working software; interested in contributing to reliable digital products, particularly in the financial technology and sharia ecosystem.

PROJECTS

E-Wallet – Backend API Oct 2026

Tools: *Golang, Gin, PostgreSQL, pgx, Redis, JWT, Xendit API, Docker, GitHub Actions, golang-migrate, Swagger/OpenAPI, gomail*

- Developed a RESTful backend API for an e-wallet application featuring authentication, account management, payment-gateway top-ups, peer-to-peer transfers, and ledger history.
- Designed a clean layered architecture (Router, Middleware, Controller, Service, Repository) using Golang, Gin, and PostgreSQL (pgx pool).
- Implemented JWT authentication (HS256) with Redis session storage for immediate token invalidation on logout.
- Built account security features: password hashing, 6-digit transaction PIN management, rate limiting, failed-PIN attempt counters, and an OTP-based forgot-password flow via gomail.
- Integrated Xendit payment gateway with dynamic invoices and webhook handlers featuring constant-time token verification, idempotency checks, and automated balance settlement.
- Engineered atomic database transactions for transfers, top-ups, and ledger recording (balance_before and balance_after) to ensure consistency and prevent race conditions.
- Documented APIs with Swagger/OpenAPI, managed schema migrations with golang-migrate, and automated Docker image publishing with GitHub Actions CI/CD.

Team project at Koda Academy bootcamp (Gin Exercise Koda Batch 9); primary ownership of backend implementation, database architecture, payment gateway integration, and API documentation.

Shortlink Service – URL Shortener Oct 2026

Tools: *Golang, Gin, PostgreSQL, pgx, Redis, JWT, Docker, golang-migrate, Swagger/OpenAPI*

- Developed a scalable RESTful backend API that generates custom short URLs with redirect tracking and analytics.
- Designed a clean layered architecture using Golang and Gin, with PostgreSQL for link persistence and Redis for caching and rate limiting.
- Implemented link management features: custom aliases, expiration dates, link generation algorithm, and fast HTTP redirection.
- Built analytics tracking for visit counts, referrer data, and access metrics per short link.
- Integrated JWT authentication so registered users can view, edit, and manage their links via a dashboard API.
- Cached link lookups in Redis to minimize database queries during high-volume redirections; documented APIs with Swagger/OpenAPI and containerized with Docker.

EventHub – Event Management & Community Platform Jul 2026

Tools: *React, Vite, Tailwind CSS, Redux Toolkit, React Router, React Hook Form, Golang, Gin, PostgreSQL, JWT, Docker, Swagger/OpenAPI*

- Developed a full stack platform to discover, filter, save, and join events and communities, with guest browsing before registration.
- Implemented role-based access control for three roles (Admin, Organizer, Attendee) with JWT authentication, refresh tokens, password hashing, request validation, and authorization middleware.
- Built RESTful APIs with Golang, Gin, and PostgreSQL covering authentication, user management, events, bookings, and administration, including migrations, pagination, search, and filtering.
- Built responsive frontend interfaces using React, Tailwind CSS, Redux Toolkit, React Router, and React Hook Form; optimized data fetching to reduce unnecessary backend requests.
- Wrote unit and integration tests, documented APIs with Swagger/OpenAPI, and containerized the application with Docker.

Bootcamp project built independently from a standardized Figma design and functional requirements.

CuanBot – WhatsApp Digital Product Transaction Automation Nov 2025
Tools: *Node.js, Express.js, Baileys, SQLite, REST API, Pterodactyl, Linux*

- Built and maintained a production WhatsApp-based transaction system for digital products, handling about 15–30 transactions and Rp700K–Rp1M in daily sales.
- Automated end-to-end transactions (balance, data packages, PLN, and other products) by integrating APIs from 3 active product providers with WhatsApp customer interactions.
- Replaced manual availability checks, order processing, payment verification, and transaction logging, eliminating a manual process of about 3–5 minutes per transaction.
- Implemented automated QRIS payment verification by processing BRI payment notifications received via WhatsApp, removing manual checks of the payment account.
- Developed real-time product availability, stock management, transaction history, balance management, Paylater tracking, automated billing, customer notifications, and configurable promotional poster generation.
- Deployed and maintained the application on a Linux-based Pterodactyl server (2 GB RAM, 10 GB storage) with application logging and error monitoring.

WORK EXPERIENCE

Sales & Customer Service Staff | PT. Mega Mentarai Sejahtera (Indosat Ooredoo), Luwu Utara, Sulawesi Selatan 2023 – 2025

- Promoted and sold telecommunications products, consistently achieving individual sales targets.
- Managed 24/7 customer balance top-up requests with high accuracy and minimal response time.
- Built long-term client relationships and handled customer complaints, resolving technical and transaction issues to maintain retention.

Notary Staff | Kantor Notaris & PPAT, Sulawesi Selatan 2021 – 2023

- Drafted legal deeds and corporate documents, including Sale and Purchase Agreements (AJB), Deeds of Incorporation (PT), and Share Transfer Deeds.
- Coordinated with land offices (BPN) and government institutions to process land certificates, transfers, and legal verification.
- Managed legal administration and document archiving with a focus on accuracy, confidentiality, and compliance.

Driver | Gojek/GoFood Partner, Sulawesi Selatan 2020 – 2026

- Delivered orders reliably while maintaining high customer satisfaction ratings through clear communication and time and route optimization.
- Acted as a liaison between merchants and customers, resolving order delays, stock issues, and complaints calmly and professionally.

EDUCATION

Fullstack Web Developer | Koda Tech Academy, Bogor, Indonesia May 2026 – Oct 2026

- Intensive training in React.js, Vite, Redux Toolkit, Tailwind CSS, Golang, Gin, and PostgreSQL.
- Practiced Docker, WSL, SSH, Linux, and basic application deployment workflows.

Bachelor of Sharia Economic Law | State Institute for Islamic Studies (IAIN) of Palopo 2017 – 2021

SKILLS

- **Backend:** Golang (Go), Gin, Node.js, Express.js, REST API, Clean Architecture, Middleware, JWT Authentication, Argon2id, pgx pool
- **Frontend:** React.js, Vite, JavaScript (ES6+), Redux Toolkit, Tailwind CSS, HTML5, CSS3, Responsive Design
- **Database:** PostgreSQL, Redis, SQLite, GORM, SQL Optimization
- **DevOps & Deployment:** Docker, Docker Compose, CI/CD (GitHub Actions, GitLab CI), Linux CLI
- **Testing:** Unit Testing (React Testing Library, Jest), Integration Testing (Postman, Go Test)
- **API Design:** RESTful API, OpenAPI/Swagger Documentation
- **Tools & Methods:** Git, GitHub, GitLab, Git Flow, Agile/Scrum, Jira, Trello, Notion
- **Cloud & Hosting:** AWS (EC2, S3, RDS), Vercel, Railway, Firebase
- **Security:** Input Validation, HTTPS, OAuth2, JWT, CORS
